

My Code of Practice

Everything published on my page and repository is part of my **personal study and learning hub**. To maintain transparency, ethical use, and respect for academic and professional standards, I adhere to the principles outlined below.

1. Academic Integrity

- All graded assignments, exams, and assessments are completed **independently**, in accordance with my institution's rules.
 - Any graded work will **not be published until after submission and grading**, and only when allowed.
 - I do **not post solutions to ongoing assessments, problem sets, or exams** that are meant to be completed individually.
-

2. Notes & Learning Materials

- All notes are written in **my own words**, reflecting my understanding of topics.
 - My notes may **reference official course material**, but all content is **rewritten and interpreted independently**.
 - My notes may be compiled from various online and offline resources.
 - I do **not** upload or share copyrighted slides, textbooks, or materials that require a subscription.
 - Short quotations, diagrams, or ideas from external sources are **appropriately credited**.
 - These notes are for **personal learning** first; they are **not official study materials** and should not be relied upon as primary resources.
-

3. Projects, Capstones, and Assignments

- Projects in this hub include:
 - **Independent learning projects** (self-directed, exploratory work)
 - **Completed academic/professional projects** shared **after submission and grading if allowed**.
 - Many projects and assignments are **based on or inspired by official prompts, case studies, or datasets**, but what is shared here is **my own work, analysis, and interpretation**.
 - Collaborative work:
 - Teammates, supervisors, or collaborators are credited appropriately.
 - Only material that I **personally created or have permission to publish** is shared.
 - Proprietary or sensitive data from organisations or internships is **never shared without explicit permission**.
-

4. Use of External Resources

- Open-source projects are used according to their **licenses** (e.g., MIT, GPL, Apache), with proper credit given.
- Research papers, articles, and tutorials are **cited clearly** when referenced.
- I do **not misrepresent others' work** as my own.

5. Transparency & Limitations

- This repository represents **my personal learning journey** and is **not an official or certified resource**.
 - Content may contain **errors, omissions, or subjective interpretations**.
 - Anyone using these notes, projects, or assignments should **cross-check with reliable sources** and official material.
-

6. Responsibility of Users

- Users of this repository should **not rely on it as their primary source** for study or professional preparation.
 - Any use of shared projects, notes, or assignments is **at the user's own risk**, and they should verify accuracy independently.
-

☒ By following this Code of Practice, I aim to maintain a **safe, ethical, and valuable learning space** for myself and anyone who may reference my work responsibly.
